Design Concepts and how they were applied to the HiFidelity prototypes:

1. Affordances
   - Buttons & Input Fields & Selectable Options: Clearly defined buttons and selectable fields indicate actions users can perform.

2. Signifiers
   - Descriptive Labels: Buttons use clear labels such as *Volunteer*, *Donate* to communicate their functions.
   - Visual Cues: We used Image placeholders and labelled sections help users recognize different content areas and understand the purpose of each section.

3. Gestalt Principles
   - Proximity& Enclosure: Related elements like Programs are positioned close together and organized into a distinct section on the Home page.

   - Symmetry& Similarity: The Pollinator Archive uses three evenly aligned profile frames to create a balanced and organized layout. Consistent shapes and layouts are used to make it visually appealing.

4. Constraints
   - Appointment & Service Availability: Appointment times are displayed based on the selected repair service and volunteer availability, preventing overlapping bookings.
