EnviroCollective Website Prototypes

Summarized Usability Insights

1.Overview

The usability evaluation aims to assess whether the enviro-collective website prototypes makes it easier for users to navigate information, discover the resources they're looking for, participate in community activities and understand the repair-cafe booking process. Through feedback from the clients, we identified specific needs that they would want to be addressed, and some of the improvement that we should have prioritized before further development.

2. Key Areas of Evaluation

Website Navigation: This is one of the most crucial elements of the website that we are supposed to create in the long term, and thus it assesses whether users can locate important sections of the websites including Repair Café, The Pollinator etc.

This means that we should consider making the site simple for anyone to use

Repair Café Booking: This shows whether users understand how to find appointments and the requirements in the booking.

Moreover, other important things includes reviewing the rules and determining what to bring to a repair session beforehand.

Visual Design and Readability: This assesses the layouts, typography and grouping of information.

Community Engagement: This determines whether users can identify activities and events within the site, volunteer and involve themselves in community initiatives.

Availability of Different Designs and Layouts

3. Findings and Recommendations

The findings should be organized around the feedback collected during the usability testing. Each inside shoots identify a specific issue, show its impact on the user, and provide other insights and recommendation for further improvement if need be.

The potential areas for improvement include:

- Making the booking availability more visible and easy to go by
- Clarifying the repair cafe requirements
- Making the different pages uniform visually
- Making sure each feature works as expected
- Making the pollinator archive and the pollinator more informative
