Design Concepts and how they were applied to the Lofi prototypes:

1. Affordances

- Buttons: Clearly defined buttons indicate actions users can perform, such as searching for resources, reading newsletters, and proceeding with bookings.
- Input Fields: Search bars and form fields indicate where users can enter information, such as keywords, item names, and problem descriptions.
- Selectable Options: Repair services and appointment times are presented as selectable elements, helping users understand how to make a booking.

2. Signifiers

- Descriptive Labels: Buttons use clear labels such as *View Resource*, *Read Issue*, and *Continue to Your Information* to communicate their functions.
- Visual Cues: Image placeholders and labelled sections help users recognize different content areas and understand the purpose of each section.

3. Gestalt Principles

- Proximity: Related elements are positioned close together to communicate their relationship, such as the item information fields on the booking page.
- Enclosure: Content is organized into distinct sections, making it easier to distinguish between different types of information and tasks.
- Symmetry: The Volunteers page uses three evenly aligned profile frames to create a balanced and organized layout.
- Similarity: Consistent shapes and layouts are used for related elements, such as the profile cards and sections on the About page.
- Figure–Ground: Spacing and visual emphasis help distinguish important content, such as booking controls, from surrounding elements.

4. Constraints

- Appointment Availability: The proposed booking system would display appointment times based on the selected repair service and volunteer availability, preventing overlapping bookings.
- Service Availability: Users would only be able to select repair services offered at the upcoming Repair Café event.
- Booking Limits: The restriction of one item per repair service at each event.
