Project Background

EnviroCollective Network (ECN) is a Saskatchewan nonprofit organization that connects, convenes, incubates, and amplifies community sustainability action in Regina and the surrounding area. Since incorporating in 2020, ECN has developed a network of environmental and civic partners and operates several programs and initiatives, including The Pollinator newsletter, Repair Café, Smash Lab, Sustainability/Climate Expo, Youth Empowerment Fund, a Resource Directory, Green Drinks/Teach-ins, and community Clothing Swaps.

As ECN's programming has expanded, its website has not evolved at the same pace. The existing website primarily functions as a static organizational resource and does not adequately represent ECN's current programs or make its resources and opportunities easy for visitors to discover. The website redesign project therefore provides an opportunity to reconsider how ECN's programs, resources, events, and opportunities for community participation are organized and presented online.

Business Need / Opportunity

ECN needs its website to better support its role as a community sustainability hub rather than primarily serving as an organizational brochure. Visitors should be able to discover current programs, locate and search environmental resources, find upcoming events, access past Pollinator newsletter content, participate in Repair Café activities, and identify clear ways to volunteer, subscribe, donate, or otherwise get involved.

The redesign also presents an opportunity to improve the site's visual engagement and information architecture while ensuring that the final solution remains practical for ECN to maintain because it is largely volunteer-run.

North Star & Carry Over customers:

The North Star are the community members seeking to discover and participate in EnviroCollective's programs, resources, events, and opportunities.

Carryover customers are the volunteers, sponsors, and ECN administrators.

Project Assumptions

- The redesigned website will continue to use **WordPress**.
- ECN volunteers/administrators will continue to manage and update website content.
- Existing ECN programs and initiatives will remain important content within the redesigned website.
- The website will primarily serve community members looking for ECN programs, resources, events, and ways to get involved.
- Existing ECN content can be reorganized and reused where appropriate.
- Bookly and WPConnect/Airtable are suitable solutions for Repair Café booking and resource-library management.

Project Constraints

- ECN has limited staff and volunteer capacity to maintain the website.
- The redesigned website must remain manageable by ECN volunteers without specialized technical skills.
- ECN operates with a limited nonprofit budget, restricting reliance on expensive tools or custom development.
- The redesign must work within the capabilities and limitations of WordPress and any selected plugins/integrations.
- Project timeline might be affected by delays in waiting for client approvals.
- The website must handle personal information appropriately, particularly information collected through booking forms.
